Subject index

Ab initio 195
Ab initio wavefunction 239
Adsorption 167
Aldehyde hydrogen wagging 259
Amino acids 101
Angular overlap model 157
Atomic separations 479

Basis set 151, 239
Basis set superposition error 101
p-Benzoquinone 195
Born-Oppenheimer 269

CASSCF 363
Cavity models 75
Chemisorption 167
Chemisorption energy 251
CNDO/S method for intramolecular CT complexes 445
Compensation 339
Complex energy 381
Configuration integral 111
Configuration interaction 299
Conformation in triplet excited state 259
Conjugated circuits 349
Conjugate molecules 55
Correlation energy 479
Counter poise correction 101
Coverage 137
Crystal field theory 219
Crystal quantum numbers 219

Density matrices 63
Dephasing 23
Derivatives 381
Desorption 339
Diamagnetic shielding 275
Diamagnetic susceptibility 275
Dicyclohepta[*cd,gh*]pentalene 209
Dicyclopenta[*ef,kl*]heptalene 209
Dynamic minimisation 85
Dynamic polarisation 299
Dynamic polarizabilities 431

Edge colorings 111
Edge group 111
Effective core potential 167
Effective valence bond 299
Electronic spectra of the [2.2]paracyclophan-equinones 445
Electron-phonon coupling 331
ELEPS surface 311
Energy transfer 311
Error potential 269
Extended-Hückel parameters 229

Geometry 195
Graphite 349
Graph theory 111
Green function 251
Group theory 63

H-bonded complexes 415
Heat of adsorption 137
$H + O_2$ 403
Hole delocalisation 299
Hydrogen 137

Independent atom model 275
Internal rotation 259
Interpretation of quantum mechanics 323
Intramolecular energy transfer 23
Intramolecular forces 269
Ionization potential 463

Ligand field theory 157
Lithium clusters 289
Lithium formate 11
Long-range interaction 463

Magnetism 137
Many-body theory 349
MBPT calculations of properties 185
MCSCF 63, 151
Methoxy isomerization 123
Mg_n^+clusters 299
MINDO/SR 137
Modelling of molecular properties 275
Modified atom model 275
Molecular collisions 311
Multiple scattering Xα 157
Multipole polarizabilities 185
Muon 75

Naphthalene 363
Natural orbitals 63
NH_3 239
Ni atom 479
Nickel 137
Ni surfaces 167
NMR 111
Nonadiabatic effects 289
Numerical Hartree-Fock 151

One-particle Green's function 463
Open shell ions 431
Optimisation 85, 195

Partition functions 493
Perturbation theory 39, 493
Phase transitions 339
Point group representations 219

Polarized basis sets 185
Polycyclic benzenoid hydrocarbons, total π-electron energy 55
Potential energy functions 259
Potential surface 1, 11
Properties of Cl^- 185

Quadrupole moments 363
Quantum beats 23
Quantum operators 323
Quasiclassical trajectory calculation 403
Quasiclassical trajectory method 311

Reaction path hamiltonian 123
Reaction surface 85
Relaxation effects 289
Resonance 381
Resonance theory 349
Rydberg states 431

SCF 101
SCF calculation 11
SCF calculations 1
Screened coulomb potentials 39
Silicon surfaces 331
Simple model 331
Spectral density function 55
Spectrum 363
Spin polarization effects 209
μSR 75
State distribution 403
Stationary point 85
Stereograph of collision trajectory 403
Supported catalysts 251
Surface 137
Surface reconstruction 331
Surface states 331
Symmetry and equivalence 63

Third-row transition metals 229
Trans halo-aquo complexes 157
Transition density matrix method 445
Transition moments 363
Transition state 85
Triplet 195

Valence-bond theory 349
Van der Waals interaction 463
Vibrational energy levels 493
Violation of Hund's rule 209

Water 493
Water-formation 1
Wavefunction tail 239
Work function 137

Yukawa potential 39

Contents

Alberts IL, Handy NC, Simandiras ED: The structure and harmonic vibrational frequencies of the weakly bound complexes formed by HF with CO, CO_2 and N_2O 415

Balasubramanian K: Graph edge colorings and their chemical applications 111
Ball JR, Thomson C: Theoretical studies on quinones. I. The structure of *p*-benzoquinone and two of its excited triplet states 195
Bauschlicher CW Jr, Taylor PR: Symmetry and equivalence restrictions in electronic structure calculations 63
Bauschlicher CW Jr, Siegbahn P, Pettersson LGM: The atomic states of nickel 479
Baykara NA → Demiralp M
Beeckman W, Goffart J: On the relationship between crystal quantum numbers and irreducible representations of point groups 219
Bellido MN → Smeyers YG
Blyholder G → Ruette F

Cai Z-t → Ju G-z
Chin S → Sordo JA
Cioslowski J, Polansky OE: Topological hamiltonian spectra of polycyclic benzenoid hydrocarbons 55
Claxton TA, Hall GG: On the use of cavity models to describe muonium in diamond, silicon and germanium 75
Clementi E → Hermansson K
Colwell SM: Tunnelling and reaction path curvature effects in the isomerization of the methoxy radical 123
Czuchajowski L → Wisor AK

Daudey JP → Durand G
Davison SG → Liu WK
Demiralp M, Baykara NA, Taseli H: Convergent perturbation studies in screened coulomb potential systems: a high precision numerical algorithm via Laguerre basis set 39
Deng C-h → Ju G-z
Durand G, Daudey JP, Malrieu JP: The conflict between hole delocalisation and static plus dynamic polarisation in molecular cations: illustration on Mg_n^+ clusters 299

Feng D-c → Ju G-z
Fišer J, Vojtík J, Penders-Vaňková E: Model study of the relaxation accompanying adsorption of atomic hydrogen on the Li(100) cluster surface 289

Goffart J → Beeckman W
Guérin P → Laforgue A

Hall GG, Nobutoki H: Intramolecular energy transfer in water 23
Hall GG → Claxton TA
Hall GG → Mizukami Y
Handy NC → Alberts IL
Hermansson K, Lie GC, Clementi E: An *ab initio* pair potential for the interaction between a water molecule and a formate ion 1
Hermansson K, Lie GC, Clementi E: *Ab initio* pair potentials for the ionic lithium-formate system 11
Hite GE, Živković T, Klein DJ: Conjugated circuit theory for graphite 349

Isaacson AD, Zhang X-G: Vibrational partition functions for H_2O derived from perturbation-theory energy levels 493

Jostes R: Extended-Hückel parameters for third-row transition metals. Part 1: VOIP parameters 229
Ju G-z, Feng D-c, Cai Z-t, Deng C-h: Dynamics of H + O_2 collisions on an *ab initio* potential energy surface 403
Julg A: The complete symmetrization of quantum operators: new thoughts on an old problem 323

Kellö V, Roos BO, Sadlej AJ: Electric properties of the chloride ion 185
Klein DJ → Hite GE
Klimo V → Tiňo J
Kreuzer HJ, March NH: Origin and information content of the compensation effect 339

Laforgue A, Guérin P: Complete error potential 269
Lie GC → Hermansson K
Liu WK, Davison SG: Chemisorption on inverse-supported catalysts: H—ZnO/Ni 251

Makhyoun MA: Effect of the orientation of coordinated water molecules on the electronic structure of trans halo-aquo complexes: application to $TiCl_2(H_2O)_4^+$ and $VCl_2(H_2O)_4^+$ 157
Maksić ZB, Supek S: Minimal requirements for approximate wavefunctions of molecules 275

Malrieu JP → Durand G
March NH → Kreuzer HJ
Matos JMO, Roos BO: A CASSCF study of the singlet-singlet and triplet-triplet spectroscopy of naphthalene 363
McCullough EA Jr → Partridge H
Mizukami Y, Hall GG: Theoretical studies on the ionization potential of interacting atoms at large separations 463
Mukherjee PK, Ohtsuki K, Ohno K: Dynamic polarizabilities and Rydberg states of open shell atomic systems 431

Niño A → Smeyers YG
Nobutoki H → Hall GG

Ohno K: Radial dependence of exterior electron distributions of molecular orbitals 239
Ohno K → Mukherjee PK
Ohtsuki K → Mukherjee PK

Panas I, Siegbahn P, Wahlgren U: Model studies of the chemisorption of hydrogen and oxygen on nickel surfaces. II. Atomic chemisorption on Ni(100) 167
Partridge H, Richman KW, McCullough EA Jr: Numerical Hartree-Fock and MCSCF calculations on diatomic copper: calibration of basis sets 151
Penders-Vaňková E → Fišer J
Pettersson LGM → Bauschlicher CW Jr
Polansky OE → Cioslowski J

Richman KW → Partridge H
Roos BO → Kellö V
Roos BO → Matos JMO
Ruette F, Blyholder G: MINDO/SR calculations of nickel surface properties as a function of hydrogen coverage 137

Sadlej AJ → Kellö V
Schwenke DW: A new method for the direct calculation of resonance parameters with application to the quasibound states of the $H_2X^1\Sigma_g^+$ system 381
Siegbahn P → Bauschlicher CW Jr
Siegbahn P → Panas I
Simandiras ED → Alberts IL
Smeyers YG, Niño A, Bellido MN: *Ab initio* study of the methyl internal rotation and aldehyde hydrogen wagging of thioacetaldehyde in the X^1A' and a^3A'' states 259
Smith CM: Application of a dynamic method of minimisation in the study of reaction surfaces 85
Sordo JA, Chin S, Sordo TL: On the counterpoise correction for the basis set superposition error in large systems 101
Sordo TL → Sordo JA
Supek S → Maksić ZB

Taseli H → Demiralp M
Taylor PR → Bauschlicher CW Jr
Thomson C → Ball JR
Tiňo J, Urban J, Klimo V: Effect of vibrational excitation of HBr on the H + HBr abstraction and exchange reactions 311
Tomášek M: Instability and (2x1) reconstruction of Si(001) and (111) surfaces: a simple approach 331
Toyota A: Violation of Hund's rule in the lowest exited singlet-triplet pairs of dicyclohepta[*cd,gh*]pentalene and dicyclopenta[*ef,kl*]heptalene 209

Urban J → Tiňo J

Vojtík J → Fišer J

Wahlgren U → Panas I
Wisor AK, Czuchajowski L: All-valence-electron and transition density matrix calculations of the electronic spectra of [2.2]paracyclophanequinones 445

Zhang X-G → Isaacson AD
Živković T → Hite GE
